

Recommended Canopy Size

We only recommend the standard fit. The tight fit can work but will effect comfort.

Standard Fitting pack volume represented by these sample groups should be considered optimum recommended pack volumes to ensure proper fit, function and ease of packing.

Loose Fitting pack volume represented by these sample groups should be considered the minimum recommended pack volumes to ensure proper fit, function.

Full Fitting Do to different canopies designs and materiel bulk some canopies have slightly larger pack volume.

These canopies have the largest pack volume that can fit in this container and still maintain proper fit and function. **Caution if you put a full fitting reserve and full fitting main in the same container (V303-310) this may be very hard to pack if bulk distribution is not correct.**

Most canopy recommendations are determined by packing the canopy into the specified container by United Parachute Technologies. Canopy types included in this chart are intended to represent a group of common canopies suitable for each container size. Any canopy type with similar pack volume as the sample group will naturally be suitable for the same container. Brands appearing in this chart are in no particular way more suitable for our Vector containers over brands not listed. **NOTE: logoeed canopies pack one size larger**

Please contact United Parachute Technologies at upt@uptvector.com. This e-mail address is being protected from spam bots, you need JavaScript enabled to view it to inquire about a canopy not listed here or if you have any other questions about sizing your rig. If you feel that a canopy not listed below fits into a particular container, please let us know and we will be happy to add it to our list should we feel the fit is acceptable for all our customers.
